

Russell Cooke

Government Chief Privacy Officer

Presentation to the
Small and Medium Agency Health & Safety Forum
Tuesday 9 October 2018

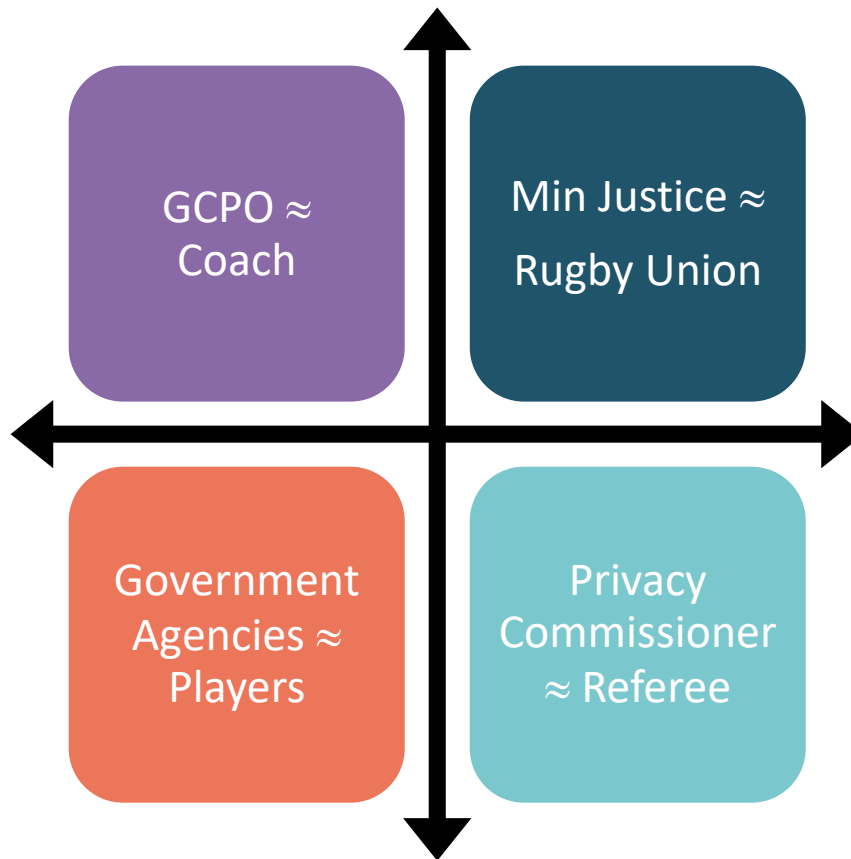

Te Tari Taiwhenua
Internal Affairs

Better information, better conversations, better decisions

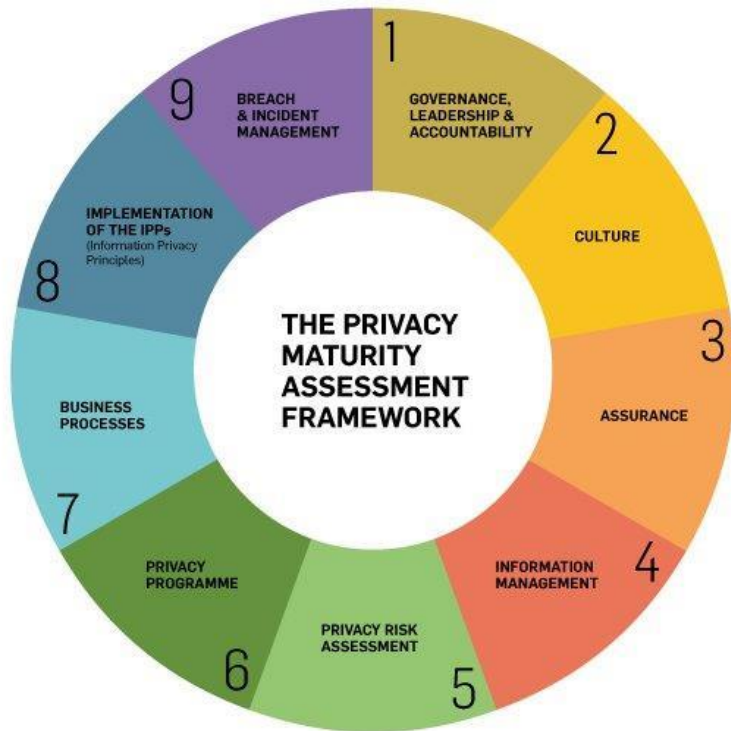

Who is the GCPO?

The functional lead for privacy across the State Services

How we do what we do?

- **10 core expectations** – procedures aligned to an agency’s overall strategy and risk profile
- **9 capability criteria** - 5 maturity levels from ad hoc to optimised, but it’s not one-size-fits all

Privacy across the data life cycle ...

1. Governance, leadership, accountability
2. Culture
3. Assurance
4. Information management
5. Risk assessment
6. Privacy Programme
7. Business processes
8. Implementation of the principles
9. Breach & incident response

So what? Why does this matter?

Relevant Government priorities:

- support healthier, safer, and more connected communities
- deliver transparent, transformative and compassionate government

Keeping pace in changing times:

Increased cross-agency collaboration & globalisation

- More information sharing; more multi-agency approaches

Managing the risks and benefits from new technologies

- Analytics; Automated decision-making; Artificial Intelligence (AI)
- Social Media; Surveillance technologies, Monitoring and CCTV

Changing public expectations & perspectives on social licence

- Ensuring people stay at the heart of service delivery

Considering human rights (including privacy) in the digital age

- How do we maintain trust, and demonstrate transparency and accountability to those we serve?
- How do we use technologies to support not suppress?
- How do we manage responsible ethical use of information?

Thanks any questions ?
